DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, 15-18, and 23-25, drawn to a computer implemented method, a computer program product, and a computer system for analyzing a case-control genetic association study, classified in class 702, subclass 19.
- II. Claims 9-14, 19-22, and 26-28, drawn to a computer implemented method, a computer program product, and a computer system for analyzing a case-control genetic association study comprising determining a complete set of values, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related subject matter. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the invention of Group I consists of the steps of providing a spreadsheet, programming the software, inputting values for genetic association and determine allele frequency. The invention of Group II is drawn to providing a spread sheet, programming software, inputting values for genetic association, determining allele frequency and

Art Unit: 1631

determining a complete set of values for parameters defining the genetic study. The method steps have different stated outcomes and therefore, the inventions are different.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
